**Santon Circuit Breaker Services has developed conversion sets for the installation of new circuit breakers in existing distribution equipment for the replacement of obsolete or worn out circuit-breakers. Our Sidunn MV Plug and Play retrofits sets are designed and manufactured with the aid of the latest state of the art techniques who are available today such as 3D design and 3D printing, which enable us to deliver solutions that interface perfectly with your existing system.**

Santon Circuit Breaker Services has developed plug and play Sidunn conversion sets using the new circuit breakers in existing switchgear, which replace old circuit breakers in existing distribution systems. These SOLUTIONS are well suited if an old circuit breaker needs to be exchanged quickly and the installation cannot be (easily) switched off. By means of the Sidunn retrofit set or conversionset, the existing set can be replaced – in a matter of minutes, and without switching off the installation.

### **The best new breakers available**
