24h
SERVICE!

www.santoncbs.com

- ✓ Management of spare parts
- ✓ Installation and project management
- ✓ Maintenance and inspection of all circuit breakers
- ✓ Maintenance contracts
- ✓ 24/7 Emergency service

Because of the many years of experience on sites around the world, our specialists know the local regulations, conditions and habits. So regardless of whether you need a project manager or a competent specialist to support your team: Santon Circuit Breaker Services offers the service you need to optimize your installation.

Certification, maintenance and on-site inspection

Degraded circuit breakers can damage your installations or components. However, degradation can easily be prevented. Periodic maintenance of your power switches provides insight into their performance and supports the choice for a service program. By optimizing the maintenance intervals you can save money in both the short and the long term.

Multidisciplinary partner

Your production must continue. That is why we are at your service 24 hours a day, seven days a week with our services and our repair and replacement program. Our specialists are experienced and equipped with specialized tools to maintain or repair any type of circuit breaker. We are the multi-disciplinary partner for your circuit breakers.

Service level agreements

We stand behind our products and guarantee that they are good. But perhaps you are looking for more guarantees yourself. We are happy to set up service level agreements (SLAs) together with you.

Safety and quality

Our specialists work all over the world, in various countries with

www.santoncbs.com

different cultures and varying laws and regulations. These circumstances demand a down-to-earth approach, a strong safety culture and the right safety and quality certificates. Santon Circuit Breaker Services is therefore certified for, and works according to, the following standards: VCA, ISO 9001, DOT and HUET.

Upgrading switchgear

The specialists at Santon Circuit Breaker Services have a great deal of experience in adapting old switchgear to the new requirements of the time. Think of con-

nections of old switching equipment that must be connected to new equipment.

To make this possible, we use the latest technical developments such as 3D printing and CAD software.
